

# Animation Software

By Paula Briggs

This resource shares the practicalities behind the filming of animations made by the [#BeACreativeProducer](#) team of teenage animators.

The team have been using 3 main apps to help build their animations.

This resource is a very simple introduction to using the main app: Stop Motion / Stop Motion Pro. This resource aims to show the basic technique offered; we are not attempting to provide a full tutorial for the software, which you can find [here, written by the software creators Cateater](#).

Whilst you can make a complete animation clip with the Stop Motion App, this resource also explains where we found it useful to combine the Stop Motion App with other software.

We hope it is useful to those just starting on their exploration of stop-motion animation. There are many other apps out there, and we would love to hear from you if you would like to recommend another app.
