

# Iridescent Insects

By [Alison Dunne](#).

*In this resource, spanning six one-hour sessions, teacher Alison Dunne talks through a drawing and embossing project, inspired by insects and the Mexican tin folk art known as 'Hojalata.' Pupils explore observational drawing, colour mixing, texture and embossing with a focus on early scientific artists and explorers such as Maria Sibylla Merian, and contemporary artists such as Rosalind Monks. This project took place with a Key Stage 2 class, but it could easily be adapted to other ages.*

# What We Like About This Resource...

This project combines art and science in innovative and creative ways. It engages children with simple and more complex sewing skills, both hand and machine. The fact that a local artist collaborated on this project, bringing her own set of skills and experience is so valuable for any extended art project, and the children were able to connect with the sensitivity of the subject matter and to empathise with it's message.

**What We Love About This Resource...**

So often, we hear talk of the distinction between science and art, and no more so when teenagers proceed through their education and they are encouraged to choose one route or another. In reality, creative thinking helps scientific

understanding and a scientific approach can inform and inspire art.

It's so refreshing to read and see Merlin's experience and understand how she works between these two areas – in her words *"mixing subjects, and seeing how they work and intersect is where inventions take place!"*

We also love the way her work embraces the *felt* world of being human, as well as the *known* world. We're sure many young people will find Merlin's work of interest and reassuring when they are pressured to choose *"art or science"*.
