

Painting the Light and the Dark...

By Paula Briggs

At the AccessArt Art Club for ages 8, 9 and 10, I wanted to spend a few weeks giving children the opportunity to brush up (forgive the pun!) on a few seeing, drawing and painting skills around the theme of still life.

This is the second resource in the series, which shares how we spent three weeks using paint to help communicate tonal values. See how we prepared for this session by [Show Me What You See!](#)

Warm Up

We began with a very playful and free ten minute warm up exercise painting crisps. The children worked on scraps of brown cardboard (nice neutral ground) and were given limited acrylic paints (red, yellow, blue).

AccessArt is a UK Charity and we believe everyone has the right to be creative. AccessArt provides inspiration to help us all reach our creative potential.

Paint, Colour and Autobiographical Imagery

Exploration of Watercolour in the Studio

After having studied watercolour paintings at the Fitzwilliam Museum Cambridge with AccessArt, teachers were invited to undertake their own exploration of working with watercolour, including colour mixing, paint techniques, and intention. This resource shares the processes and outcomes of the practical studio session.

Exploring Watercolour at the Fitzwilliam Museum Cambridge with AccessArt

part 1: Introduction to Watercolour

The resource describes and demonstrates individual watercolour techniques, and then shows examples of these techniques in paintings from the Fitzwilliam Collection.

part 2: Exploration of Watercolour in the studio

After studying paintings from the collection at first hand and identifying how various marks within the paintings may have been made, teachers undertake their own exploration of working with watercolour.

‘Pouncing’: A Simple Technique to Transfer Patterns onto Plaster Tablets

Gilding and a ‘Touch of Gold’

Painting on glass

The Firm

In 1862 Frederick Leach started F. R. Leach & Sons, artist-decorators who worked with the best-known Victorian architects/designers including William Morris, Charles Kempe and George Bodley.

Their expertise led the firm to work on ecclesiastical and civic arts, crafts and decoration as well as domestic architecture and interiors.

If their workshops could talk they would have told of stained glass being designed, painted and fired; stone statues carved; wooden decorations turned; panels chiselled, decorated and gilded; furniture crafted; metal forged; and tiles painted. In fact they could create anything that a well-decorated house, church or college would need.

Pouncing

Wall painting was a popular decoration for churches during the neo-gothic revival in the mid to late Victorian era.

The paint colour was mixed by hand and then often applied straight to the wall or ceiling. The design was often painted freehand or using stencils which included a technique called 'Pouncing'.

This technique is where the design is drawn out on paper and the outline is pricked all around to produce small holes.

This is then placed on the wall and dabbed all over with a small bag of fabric filled with powdered graphite or chalk. The powder is forced through the holes so that when the paper is removed it leaves an outline of the pattern on the walls.

Gilding

Gilding was a popular finish for the ornaments that decorated the ceilings of neo-gothic churches.

These ornaments were made of lead or plaster and were often start that shone down from their great height once gilded in gold.

The first stage to gilding is when gold is pounded until it becomes as thin as tissue paper (25g can be beaten out to cover an area of 3m square).

The surface of the ornament to be gilded is prepared by

brushing it all over with a glue called size.

This is left to dry until it reaches a 'tacky' state.

The gold sheets are then carefully laid onto the surface of the ornament and the size sticks it to the surface.

The gold is then worked into all the areas of the ornaments using a brush to push it down. There were special brushes made for doing this including one made from squirrel's fur.

Stained Glass

The neo-gothic revival saw a resurgence in stained glass design for churches and domestic architecture of the day.

One technique used was that of Silver Staining Glass. This is where silver nitrate is painted onto clear glass and fired until the silver paint becomes part of the molecular structure of the glass and produces colours from a pale yellow to a rich orangey-amber.

Follow the link above to see [How to Print on Glass](#).

Motifs or designs were painted onto glass 'quarries' or shapes of glass that would be could together to form a leaded window.

For this reason diamonds, squares or other shapes that would tessellate were popular. This type of stained glass window also allowed a lot of light into the building which went well with the decoration of a neo-gothic church where the walls were decorated and deserved to be seen.
