

# Foamboard

## Exploring Materials: **Foamboard**

Foamboard is a versatile material that works well for construction projects, many of which form the basis of our sculpture resources. Paper-covered foamboard is particularly effective, as it supports both structural building and mark-making. However, where possible, we recommend using [cardboard](#) as a more environmentally responsible alternative to foamboard.

Find resources on this page that help aid your exploration of construction using foamboard.
